

## i2 Analyzes and Takes Note of Edge Video Training

From drug trafficking to terrorism to white collar crime, law enforcement organizations are facing increasingly sophisticated adversaries that blur traditional lines between borders and cultures, technologies and organizations.

To combat these challenges, law enforcement and intelligence organizations have adopted advanced analysis and visualization tools that identify connections, patterns and trends in complex data sets. By discerning and visualizing these relationships, the tools can provide the right information at the right time for the maximum disruption of terrorist, criminal and fraudulent activities. One of the most advanced is Analyst's Notebook 8 (AN8) from i2.

More than 2,000 organizations worldwide across criminal justice & public safety, national security, military and commercial sectors rely on AN8 to quickly turn large volumes of data into actionable intelligence with powerful and rich analysis capabilities. And i2 relies on Edge Technologies for the video capture tools that makes AN8 training quick and easy.

### *Training Expands and Enhances Tool's Power*

i2 Analyst's Notebook 8 delivers the rich, assisted analysis and visualization capabilities needed to help turn large sets of disparate information into high quality and actionable intelligence.

Supporting dynamic human thought process and offering unparalleled visual analytics, AN8 enables analysts to quickly understand large amounts of data, uncover seemingly unrelated links and display complex information in intuitive visual charts. Charts can be generated automatically from structured data, or the analyst can manually build visual products.

In the hands - or at the fingertips - of an experienced AN8-savvy analyst, this powerful software tool can dramatically reduce the time needed to solve, reveal and disrupt criminal activities. However, in times like these, law enforcement and intelligence agencies need to keep their best analysts on the job, solving and preventing criminal activity. The question is how to capture and share this knowledge, without taking the analyst out of the field.

As the challenges confronting military and civilian agencies have rapidly expanded, so has the number of analysts working to counteract threats and capture criminals. And the faster new and even experienced analysts can master new tools and or new features, the safer we all are. As with all sophisticated tools, training and experience make a powerful solution even stronger. i2's Analyst's Notebook is no exception. That's why, when a major U.S. government agency asked i2 for an easy-to-use method to capture and transfer the AN8 knowledge and techniques of their best analysts, i2 turned to the team at Edge Technologies.

### *Video Training: The Great Force Multiplier*

The agency's goal was a fast and easy way to capture the events occurring on the screen as the analyst does his or her job, and to do so with little or no training. This would create an effective media to transfer knowledge, procedures and how-to videos to a large audience in a format that was consistent with technology that is readily available to all users.

## About Edge

Since 1993, Edge has been providing leading-edge products and services to many of the world's most secure network infrastructures. Our core management and technical team has led the company since its inception, developing groundbreaking solutions and products such as AppBoard, enCapture, enGage, enPortal, Data Alchemist and N-Vision™.

From data visualization to cyber-security, Edge Technologies has revolutionized the way people view, share, engage and secure information. Government and businesses rely on COTS or custom solutions from our expert IT and development professionals to:

- \* Align content with mission/program goals
- \* Empower sharing and collaboration
- \* Ensure compliance, privacy, and security
- \* Maintain access to essential skills and knowledge
- \* Streamline operations, improve service, and reduce costs

Edge Technologies' clients include Fortune 500 companies, Managed Service Providers, and the United States Federal Government.

For more information please visit [www.edge-technologies.com](http://www.edge-technologies.com), or call 1-888-771-3343.

With considerable experience in the intelligence community, Edge has been a leading provider of data visualization and integration tools to government and commercial clients for more than 16 years. This experience allowed Edge to quickly provide i2 and its government client with an easy to use solution, combining Edge enCapture technology with AN8.

Edge enCapture is a powerful video capturing software that records the actions taken on a computer screen and easily creates wmv, mpeg or avi files from the desktop. It is the ideal solution for creating software training, demos, tutorials, and additional material to enhance presentations. enCapture also supports text annotations, sound, and screen notes.

enCapture records all screen activities, such as movement of the mouse, processes of applications, and the inputs from the keyboard. With enCapture, analysts can capture their AN8 computer screen actions, save them in a standard movie format and share them across secure intranet connections with other agency analysts. There is no need to download Flash, or other special programs, to run enCapture.

A key feature of the Edge solution is enCapture's ease-of-use. Prior to contacting Edge, the client had attempted to create training files using other commercial screen-capture products. Ironically, the very products evaluated to facilitate training were difficult to use and would then require training on the software intended to provide the training. Conversely, enCapture is extremely simple to use and can be put to work in minutes.

enCapture empowers the agency to:

- Increase AN8 training resources available locally and across distances
- Create on-the-fly updates to processes, techniques, and procedures as new Analyst's Notebook features are added
- Quickly duplicate successful analytical solutions to combat new criminal tactics
- Create visual Standard Operating Procedures (SOPs).
- Create problem-solving procedures visually

## Results

Providing step-by-by "hands-on" instruction expedites training and yields better analytical results faster. enCapture provides an innovative and affordable way to make the agency's analysts and AN8 more productive, without taking top analyst's out of the field. enCapture allows the agency to capture and share the analysis techniques of their most experienced analysts with their team of more than 12,000 users.

Whether fighting drug trafficking, terrorism or white collar crime, i2 Analyst's Notebook provides analysts with a powerful tool to solve, disrupt, and prevent terrorist, criminal and fraudulent activities. And Edge Technologie's enCapture serves as a force multiplier - capturing and sharing the knowledge and techniques of the best analysts to make a powerful tool even stronger, and all of us, perhaps a little safer.
