

Edge Vision

Edge Technologies specializes in managing the way people view, share, and engage information. Government and businesses rely on COTS or custom solutions from our expert IT professionals and proven development team to align their content with their [mission/program] goals. They recognize us as specialists in managing the way people view, share, and engage information. However they're prioritized, most enterprise challenges point toward two universal needs: usable information and talented people. These are exactly what Edge Technologies provides with our core practices in Data Visualization, Content Assurance, and Staff Augmentation. Through our solutions in these areas, we help agencies and businesses meet their requirements, keep their programs on track, and stay within budget. Our name very aptly describes what we do. We give our customers every information and resource advantage for achieving their goals.

Company Overview

Founded in 1993, Edge has been providing leading-edge products and services to many of the world's most secure network infrastructures. Edge's core management and technical team, which has led the company since its inception, developed groundbreaking solutions and products such as N-Vision, enPortal, enGage, enCapture, AppBoard and Data Alchemist.

Edge Technologies extensive client lists include the United States Federal Government, Fortune 500 companies, the world's largest Telecommunication Companies and Managed Service Providers.

Edge Practices

Data Visualization

Edge employees are experts at integrating real-time applications and content into almost any type of presentation infra-

structure. Edge's platform-agnostic approach guides customers through the entire lifecycle of a portal, dashboard, or software deployment. Thus, reducing schedule risk and enabling securely shared content by accelerating roll-out and minimizing custom development.

Content Assurance

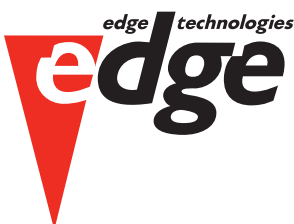

Edge adds a component of protection to perimeter security and defense-in-depth by safeguarding customers' information against illicit or risky human behavior. With Edge's content assurance solutions, customers can identify unauthorized activity and enforce their policies through response options ranging from passive monitoring to proactive intervention. Edge helps agencies and businesses mitigate risk associated with users behind their firewall by detecting patterns of activity that could evolve into malfeasance and responding with warnings, alerts, or automatic action.

Staff Augmentation

Edge averts the impact of workforce challenges by rapidly reinforcing agencies and businesses with skilled IT professionals and software developers. Edge has built a substantial team with advanced degrees, certifications, and clearances. Edge employees are ready to cover the entire spectrum of our customers' enterprise personnel requirements. Edge ensures continuity of performance (COP) by selectively recruiting employees with superior qualifications and hiring for commitment to the mission as well as knowledge or skills.
